# DECKSTONE TILE

**EXCLUSIVELY** designed and manufactured by **COVERDECK SYSTEMS!!** Never before offered; **DECKSTONE** provides a myriad of patterns, *designed for outdoor environments* with the benefit of our interlocking drainage system. The **DECKSTONE TILES** are made of a blend of recycled H.D.P.E. (high density polyethylene) plastics and a flour binder; making them an environmentally friendly choice. **DECKSTONE** is the ultimate material for exterior use because you do not have to paint or stain it like typical wood decks. It is also easily maintained. Unlike other products, our **DECKSTONE TILE** will not mildew or mold within the composite. The snap together design makes installation easy and fast, requiring no special tools or adhesives. The unique design of the interlocking tray with its 304 supporting legs promote drainage and air circulation. Water sweeps through and under the tray taking with it any dirt, sand, etc from the surface providing a self cleaning action. This flow through design helps keep the **DECKSTONE** and its subsurface clean.

**DECKSTONE TILES** generate savings by eliminating the expense of removing the existing surface. Our tiles can be installed directly over your patio or deck. You can create additional savings by installing the tiles yourself. **DECKSTONE** will transform your deck into a signature show piece.

## FEATURES:

- No break surface
- Snaps together
- Slip resistant
- No painting or staining required
- Mildew & mold resistant
